AWS Security Hub

AWS Security Hub is a tool providing comprehensive insight into the security status of various AWS accounts and services as well as solutions provided by external partners. By using automatic compliance controls based on best AWS practices and industry standards, they monitor resources and provide a reliable picture of their security level.

What does the AWS Security Hub consist of?

- AMAZON MACIE
- AMAZON GUARDDUTY
- AMAZON INSPECTOR
- OTHER INTEGRTED SOLUTIONS

AWS Security Hub is a tool that collects notifications from such services as **Amazon GuardDuty**, **Amazon Macie** or **Amazon Inspector**. Thanks to it, we gain a reliable and transparent report with ready charts and tables. The service is also integrated with external tools such as McAfee.

The perfect solution for companies from areas

- SaaS
- Big Data
- E-commerce

How does AWS Security Hub work?

Launch AWS Security Hub

1. Select the AWS Security Hub service from the AWS console and launch it. Detailed instructions can be found in the AWS Security Hub User Guide.

Monitor threats

2. Verify the results collected from AWS accounts and partner security services. They signal emerging potential threats or security gaps.

Control compliance reports

3. Perform automatic compliance checks. Use industry standards, for example CIS AWS Foundations Benchmark

Take action

4. Choose the option sent by the CloudWatch Events service or Lambda integration, notifications that suits you best, e.g. notifications in tickets, chat or email.

Benefits of AWS Security Hub

- time-saving,
- ccurate and comprehensive reports indicating threats and vulnerabilities in security,
- compliance with the best practices and standards in the industry,
- automated security solution,
- the possibility of integration with security offered by other suppliers .
